Berkana Resources Corporation and CIDG, Corp. Announce Industry First Comprehensive Security and Compliance Solution (CSACS™) for Critical Infrastructure

Denver, Colorado, January 30th, 2009 – Berkana Resources Corporation and CIDG, Corp. are pleased to announce the release of our Industry first, Comprehensive Security and Compliance Solution™ (CSACS™). CSACS™ integrates Modulo's award winning Risk Manager™ tool with the proprietary approach to performing Security and Compliance Assessments developed by Berkana, CIDG, and Joyce & Paul, PLLC.

Leveraging the same research and years of experience used to create the Holistic Lifecycle Model™ for Industrial Security, Berkana Resources and CIDG's new CSACS™ adds additional depth and functionality to our already unparalleled risk management and compliance services. Supported by legal counsel, our comprehensive approach begins with due diligence by helping clients establish privileged and secure communications throughout the entire process. Once the ground rules are set, our experienced team utilizes CSACS™ methods and tools to assist clients with implementing a completely comprehensive and seamless risk management and compliance process that will help minimize both risk and liability.

CSACS™ is not just a cyber security assessment tool. It is a complete solution that was designed to provide an entire process and supporting framework for addressing Cyber, Physical and Operational security requirements for SCADA system operators in the Oil & Gas, Water and Electric Utility Markets.

CSACS™ assesses risk by examining controls, looking directly for and prioritizing vulnerabilities and can even correlate data from other 3rd party assessment tools and methodologies. Once assessment data has been captured, CSACS™ provides an automated and customizable risk analysis engine, a Workflow Manager* to assist you with remediation, a Business Continuity and Disaster Recovery Planning tool*, and a knowledgebase to help consolidate necessary information that may be scattered throughout your organization.

In addition to incorporating our Holistic Lifecycle Model™, including any industry standard or client policy and procedure into your compliance assessment, Modulo's patent pending

Metaframework update feature was designed to automatically keep asset owners up to date on the latest changes to industry standards, guidelines, best practices and regulatory requirements.

For additional information on Berkana Resources and CIDG's Comprehensive Security and Compliance Solution™, (CSACS™), contact Jeff Whitney or Clint Bodungen or visit our websites at www.berkanaresources.com or www.cidgcorp.com .

ABOUT Berkana Resources Corporation - Berkana provides SCADA Systems Security, Integration and Consulting services to clients in the Oil & Gas, Water and Utility Markets. Our seasoned staff of engineers, integrators and project managers provide these services to clients implementing, upgrading, maintaining and securing SCADA systems.

ABOUT CIDG Corporation - CIDG is a highly trained team of specialized experts with a single goal... to secure your SCADA, Process Control and Critical Environments. From physical and operational security, to cyber security, to legal and regulatory compliance, CIDG offers you the most comprehensive compliance and risk management services available in the industry.

About Modulo: Award-winning [Modulo Risk Manager](#)™ provides organizations with the tools they need to automate the processes required for assessing and eliminating security vulnerabilities and attaining regulatory compliance (PCI DSS, SOX, ISO 27002, ISO 27001, COBIT, and more). The software allows organization to identify controls that should be implemented and obtain detailed recommendations based on best practices.

* Modulo Risk Manager Modules sold separately
